

Datapath Video Wall Controller

Wavestore's integration with Datapath hardware technology delivers a highly scalable and cost effective solution for displaying multiple live IP sources, up to 4k in resolution, across an unrestricted video wall display.

Key features

- Scalable high frame rate, full fidelity and ultra-high-resolution display of live IP video sources across the video wall via Wavestore's VMS
- Datapath ImageDP4 Graphics Cards allow 4 x true HD DisplayPort outputs per card with support for 16 cards per system, providing up to a 64-screen video wall
- Up to 12 x 1080p/30 fps simultaneous video decode density equivalents per ActiveSIX Card with support for 20+ cards per system
- Execute Google maps, SCADA, spreadsheets, video conferencing, web pages and more across an unrestricted video wall
- Compatible with standard computer monitors, reducing the total cost of ownership
- Ability to stream back to Wavestore servers from the video wall to record and store HDMI, DVI, Component, Composite, Display Port, SDI and VGA input sources
- Operators can display images on the video wall independently from that on their own monitors, or duplicate the view they have on their own workstation
- High reassurance for hardware and software reliability, dual redundancy, RAID options and quality control
- Capture, display and encode DVI, HDMI, SDI, Composite, Component, VGA and Display Port signals across the video wall using the Vision Capture Card range from Datapath
- Dynamic video wall layout creation from multiple Wavestore event configurations

Server side

User defined video wall layouts can be configured to change on specific alarms or events driven from Wavestore's VMS. Highlighting areas of operator interest, the video wall solution benefits from taking a host of input type combinations in addition to Ethernet, such as servers, SCADA, workstations and broadcast equipment using capture cards. The underlying Windows based video wall controller platform provides users with the ability to display news feeds, maps, information sheets and much more. Video wall sources can also be encoded and made available over the network for Wavestore's VMS viewing and archiving for complete situational awareness.

Wavestore VMS servers and Datapath's video wall controller are connected to each other via the network. In order to facilitate integration between Wavestore and Datapath the Datapath Module needs to be specified from Wavestore at the time of order to enable the integration on the Wavestore VMS server(s). The Datapath Module is compatible with Wavestore's Premium license, and included at Enterprise and Ultimate level. Please, request your module for Enterprise or Ultimate level licenses, as it won't be automatically included in the licence build.

Client side

Wavestore's WaveView client software application can be installed on multiple client machines to access Wavestore server(s) across the entire security solution. WaveView provides complete live monitoring and playback control of cameras and other connected devices, and enables the operator to control what live view layouts are displayed on the video wall. Users are able to collaborative on the shared video independently from their own screen(s).

Additionally, users are able to duplicate their workstation onto the video wall. On specific alarm or event, triggered by motion, video analytics or access control for example; the video wall layout can be configured to change to an appropriate view to give a full situational overview of the alarm or event. WaveView allows the operator to view live video, search for events or manage triggers linked to intrusion events either in real time as they happen or via post-event interrogation. Thanks to the Wavestore's 3-click evidential export function, operators are then able to easily stitch together video from time-synchronised events from one or multiple cameras simultaneously into a variety of file formats, and create a storyboard of events with a sequence of cameras, including virtual PTZ control of 360° fisheye cameras.

WAVESTORE INTEGRATES

Datapath Video Wall Controller

What to order

To enable Datapath integration with Wavestore's VMS, please order the following for each Wavestore NVR/HVR:

INT-WS-DATAPATH-01 - Integration module for full two-way communication between Wavestore and Datapath. Order one per Wavestore NVR/HVR.

The Datapath integration module is compatible with Premium, and free of charge with all Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.
