

ISS SecurOS Auto ANPR

Combining Wavestore's intelligent Video Management System with the effective SecurOS Auto License Plate Recognition system from ISS enables users to capture licence plate information and carry out a number of automatic or manual actions based on the information received.

From creating alerts to specific plates, to searching through captured video data to find required information, everything can be managed from one screen using Wavestore's intuitive client.

Server side

Number plate information, along with any video or images captured, are processed by the ISS SecurOS Auto system and sent to, stored in, and accessed from the Wavestore metadata engine, which is an option you must include when specifying your Wavestore VMS edition. The Wavestore VMS can be installed on Wavestore's own range of servers, or on a host of compatible third-party brands, providing video, data and recording management across the end-customer's site.

Each number plate image is received instantaneously, which enables the operator to quickly verify events as they occur. The ISS SecurOS Auto system provides full number plate enrolment, administration, control and management across the end-customer site. Using the Wavestore platform, overview cameras and other third-party technologies can be easily integrated to provide situational awareness in a complete solution.

Client side

Wavestore's WaveView client software application can be installed on multiple client machines to access the Wavestore server(s). WaveView provides complete live monitoring and playback control of cameras and other devices, as well as enabling data and number plate images from the ISS SecurOS Auto system to be monitored and

controlled from the same screen. The ISS SecurOS Auto technology sends each number plate image instantaneously to the client which can also be associated with an overview of cameras, enabling the operator to quickly verify events in real-time. Users can manage complex Event Rules including combined or consequential events triggering alarms or actions, such as emailing a video clip. Partial or full number plates can be searched against or have alerts associated to, as well as listed on watchlists which have custom alarms assigned to them. In addition, it is possible to overlay individual number plate details upon capture to any number of associated cameras. This allows an operator to view live video, search for events or manage triggers linked from access control events either as they happen or via post-event interrogation.

Operators are then able to easily stitch together video from time-synchronised events using Wavestore's 3-click evidential export function. Users can search for specific number plates or number plate groups via WaveView, to quickly bring up event lists and associated video, incorporating IF, AND, OR functionality to search for number plates that have, for example, entered a specific entrance, which can be viewed on a multiscreen for efficient searching. Event Rules can be configured by combining event triggers from multiple different sources using Boolean operators; AND, OR and XOR to produce event responses when just the right set of circumstances occur. Client Actions can be programmed to alert operators using WaveView, controlling what is shown on-screen to ensure they are kept fully aware of a situation, even when multiple events are occurring concurrently.

Key features

- Accurately capture license plate information at 130 mph (210 km/h) and in all kinds of weather conditions, including light fog, rain, and snow
- Effectively deal with different tasks related to control of parked/moving vehicles in law enforcement, commercial, and municipal organizations
- Integrates easily with third party parking management or smart roadway systems, as well as legacy security equipment and external databases
- Every recognized license plate has associated video or snapshot of the vehicle passing
- Adds powerful post-event search functionality to ANPR applications
- Benefit from adding overview cameras to ANPR cameras, providing better situational awareness events as they occur
- Customise actions from triggered events, which can enable any number of actions such as operating third-party components, emailing video clips and alerting security personnel
- Easily search for events from any keyword which will instantly bring up video, and backup using Wavestore's 3-click evidential export function from associated cameras

WAVESTORE INTEGRATES

ISS SecurOS Auto ANPR

What to order

To enable ISS Integration with Wavestore's VMS, please order the following for each Wavestore Video Server/NVR/HVR:

INT-WS-ISSLPR-01 - ISS integration module for full 2-way communication between Wavestore and ISS. Order one per Wavestore Video Server/NVR/HVR.

The ISS integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.

About ISS

Intelligent Security Systems, ISS, is a world leading developer of security surveillance and control systems through audio and video capture, recording, and analysis of patterns, of video images and digital data transmission.

ISS provides a comprehensive line of digital video surveillance solutions that are at the forefront of security, with the ability to be tailored to each project, allowing centralized command and control of an entire enterprise security network in a single place.

The ISS experience has advanced algorithms that provides a level of intelligence and analytics that was available only for government and military applications.
