

2N Intercoms

Wavestore’s integration with 2N’s secure and convenient intercom solution provides audio and video communication allowing operators to view intercom interactions in real-time as well as providing post-event search capabilities to review incidents.

Key features

- 2N has a variety of intercom options available, including luxury, modular, rugged, single-button, surface or flush-mounted intercom
- Video and two-way audio supported to provide a complete communication solution
- Events from and to the device are supported via Onvif
- Synchronised audio and video recording in the Wavestore VMS provide real-time situational awareness
- Record video and audio, which equips operators with real-time and searchable post-event footage
- Wavestore’s powerful event engine can receive data from any device on the network to allow seamless integration with a multitude of external party devices
- Increase efficiencies and protect the safety of your people.

Benefit from best-in-breed hands-free communication with associated lip-synchronised video data from a multitude of camera types to provide complete situational awareness.

Server side

The integration between Wavestore and 2N is based on Onvif which provides the ability to scan for available devices over the network as well as connecting a variety of camera types and brands. Within these cameras, the ability to dewarp 360 cameras is embedded within the Wavestore software. Events both from and to the intercom device is supported by Onvif, and can be further interrogated using Wavestore’s evidential 3-click export function. Video and two-way audio is supported which provides operators with a robust and secure communication solution.

When an event occurs – for example, when the intercom button is pressed - both audio and video data is transmitted to, and retained, by the Wavestore VMS servers. This data can be accessed at any time, from any client pc in the system within the 30/60/120-day recording policy (depending on the customer’s requirements). When combined with Wavestore’s ‘Cause and Effect’ event engine, the solution is able to receive data from any device on the network which can also be seamlessly integrated with various third-party devices, and alerts can be set up to automatically or manually trigger actions.

Client side

Wavestore’s WaveView client software application can be integrated with intercom devices across multiple locations to provide a complete and secure overview.

Operators can react and interact with intercom transmissions as and when they are triggered. Furthermore, all audio, video and events can be managed from the client side making it easy and simple to provide the situational context as it occurs.

WAVESTORE INTEGRATES 2N Intercoms

What to order

To order 2N Integration with Wavestore's VMS, please request the integration module upon placing any license orders:

INT-WS-2N-01 - Integration module for full one-way communication between Wavestore and 2N. Order one per Wavestore Video Server/ NVR.

The 2N integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.
