

Axis Audio

Wavestore's integration with Axis Network audio solutions puts the power of IP to work to allow operators to proactively protect staff, customers and property on their premises, as well as optimising operations.

The system can be used to deter security threats through automated messaging or alerting personnel, or to increase efficiencies through background music, communication, and advert delivery. Using Wavestore's Cause and Effect[®] event rules engine, events can be responded to in real-time and with other integrated technologies activated, and all events can be interrogated through exported evidential lip-synchronised video.

Server side

The Axis audio device is connected over the network to Wavestore's Metadata Engine, which is an option you must include when specifying your Wavestore VMS edition. Wavestore's Events Engine can be utilised to create automated or manual alerts or actions when an event is triggered. This could be pre-recorded messages triggered in response to potential criminal activity or notifying security personnel to speak directly to an intruder. The lip-synchronised video data is fully searchable for post-event interrogation, making it possible to retrospectively recall a specific scenario for review or evidence. Audio can also be utilised to increase operational efficiency through creating an enjoyable environment with background music, delivering spoken adverts, and paging employees.

Two-way audio is made possible when connected to compatible audio devices, including cameras with built-in speakers, to allow operators to communicate either when alerted by the system to an incident, or when visually assessing a situation in real-time. Wavestore's VMS can be installed on Wavestore's own range of servers/appliances, or on a host of compatible third-party brands, providing video, data and recording management across the end customer's site.

Client side

Wavestore's WaveView client software application can be installed on multiple client machines to access the Wavestore server(s). WaveView provides complete live monitoring and playback control of cameras and other integrated devices, with the ability to overlay event information on to the video from associated cameras, giving the operator quick situational awareness.

WaveView enables the operator to view live video, search for events or manage triggers linked from events either in real time as they happen, or via post-event interrogation. Operators are then able to easily stitch together video from time- and lip-synchronised events using Wavestore's 3-click evidential export function.

Key features

- Proactively deter crime by responding immediately and intervening remotely with prerecorded or live messages
- Lip-synchronised audio recording as standard – for supported devices.
- Improving communication and support operations using audio announcement, music or communication
- Easily search for events from any keyword and instantly bring up video and backup using Wavestore's 3-click evidential export function from associated cameras
- Ability to customise actions to trigger events with any number of actions performed thanks to the Wavestore events engine
- One screen, total control – just one operator screen to seamlessly manage events from all integrated technology, such as Access Control and Intelligent Video Analytics

WAVESTORE INTEGRATES

Axis Audio

What to order

To order Axis Integration with Wavestore's VMS, please request the integration module upon placing any license orders:

INT-WS-AXISSPKR-01 - Integration module for full one-way communication between Wavestore and Axis. Order one per Wavestore Video Server/NVR.

The Axis integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.

About Axis

30 years ago, the advent of Axis network video systems transformed the way businesses protected their operations. Now, Axis network audio systems do the same for how businesses use audio. They bring the many benefits of IP to the world of audio and offer an array of features for improved audio. Use them to warn off intruders and thieves, provide instructions in an emergency, make announcements, and even play music.
