

Commend Intercom

Integrate seamlessly with Wavestore’s Waveview for a central communication solution that constantly and reliably exchanges data, video and audio streams. Users can utilise their full potential in well-coordinated interplay to provide integrated solutions for both operators and users.

Combining Wavestore’s video management platform with Commend’s renowned intercom technology helps provide a complete security and surveillance system and enables operators to view intercom interactions in real-time.

All embedded cameras can be fed onto the Wavestore WaveView client which then transmits the view back to the operator. Additionally, a multitude of cameras can be linked to the system providing a complete 360-degree view and record of events. These 360-degree view cameras can also be de-warped using WaveView’s inherent de-warping functionality.

The Wavestore VMS capabilities to link video with audio data from the intercom will provide the operator with near-instantaneous video playback. Quickly and easily retrieve recorded footage and benefit from access to the accompanying audio information. This audio/video data is automatically synchronised in the Wavestore server. This substantial capability can equip you with the means to provide proof, context and evidence should you need it.

High-quality, hands-free communication that is audible over any background noise and distance. The perfect communication solution.

Server side

When an event occurs – for example, when the intercom button is pressed - both audio and video data is transmitted to, and retained, by

the Wavestore VMS servers. This data can be accessed at any time, from any client pc in the system within the 30/60/120-day recording policy (depending on the customer’s requirements).

Based on Onvif, this integration provides the ability to scan for available devices over the network, as well as linking a multitude of cameras to the system.

When combined with Wavestore’s event engine, this powerful event system is able to receive data from any device on the network which can also be seamlessly integrated with various third-party devices.

Client side

Wavestore’s WaveView client software application can be integrated with intercom devices across multiple locations to provide a complete and secure overview.

Operators can react and interact with intercom transmissions as and when they are triggered. Furthermore, all audio, video and events can be managed from the client side making it easy and simple to provide the situational context as it occurs.

Thanks to Wavestore’s WaveView de-warping capabilities, operators now react to 360-degree views of situations and triggered events.

Key features

- Synchronised audio and video recording in the Wavestore VMS provide real-time situational awareness for operators so that they can ensure the security of their site.
- Combining Wavestore’s VMS and Commend’s highly secure intercom system provides an exceptional and reliable communication solution.
- Record video and audio, to equip operators with real-time and searchable post-event viewing. All recordings can be accessed post-event to facilitate any investigations necessary.
- Wavestore’s powerful event engine can receive data from any device on the network to allow seamless integration with a multitude of external party devices.
- Line Monitoring checks the connections between Commend’s Intercom stations and the Server to maintain secure, trusted communication.
- Increase efficiencies and protect the safety of your people.

WAVESTORE INTEGRATES

Commend Intercom

What to order

To enable Commend Intercom integration with Wavestore's VMS, please order the following for each Wavestore Video Server/NVR/HVR:

INT-WS-COMMEND-01 - Integration module for full two-way communication between Wavestore and Commend Intercom. Order one per Wavestore Video Server/NVR/HVR.

The Commend Intercom integration module is compatible with Premium, and free of charge with all Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.
