

Everbridge Control Center

Wavestore's integration with Everbridge Control Center allows users to efficiently manage security operations from one screen to improve situational awareness and management of systems. This enables security personnel to take appropriate action when events occur in a timely manner, by using an information-based system to proactively manage responses to incidents.

The Everbridge Control Center solution is integrated using Wavestore SDK, which allows clients to connect to a single server or to a multitude of servers depending on the size of the project. The platform can connect to each individual server within the solution, which can then retrieve a large amount of data to be processed and stored in the Wavestore server. This includes the current server status along with a list of available cameras, both live and recorded video, which provides the same user experience as the native WaveView client application. 2-way audio is possible from any supported device which is connected, enabling users to respond and manage events in real-time.

The Everbridge Control Center PSIM enables fast resolution, automated reporting, and complete audit trails of incidents. Furthermore, continuous process improvement initiatives are built into the solution, including training drills and system healthcare checks.

Everbridge Control Center correlates events from disparate safety and security systems into a common operating picture to focus people's attention on what really matters. The platform provides users with actionable alerts, next step actions, and automated reporting to better manage risks, ensure compliance with operating procedures and support your business continuity. Automated workflows ensure rapid, consistent responses, reducing the risk of human error. It also facilitates direct device activation to ensure you are always in operational control and protecting your people. Dynamic reports and dashboards provide real-time actionable insights for your operations teams and senior executives.

With Control Center, your organization can be safe, secure, and in operational control. Now and in the future. Key benefits include;

Real-time situational awareness - Control your assets through a single common operating picture, not as isolated systems and data. Control centrally and work independently through federated architecture for global deployments.

Reduce risk - Automate decision-making and compliance procedures to ensure that the appropriate process is followed for any given situation. Have confidence that a consistent response is used in accordance with your standard operating procedures (SOPs).

Accelerate response times - Automate actions and consistent next step tasks to accelerate response times, such as activating response teams or triggering instructions to other systems.

Avoid technology lock-ins - An open integration platform and existing library of 250+ drivers enables you to avoid big-bang expenses by taking a more evolutionary approach to new technology spend.

Prevent information overload - Focus attention and ensure compliance with an orchestration engine that correlates events and maintains security and auditability.

Keep stakeholders informed - Improve efficiencies, effectiveness and visibility through automating performance reporting and real-time dashboards that are configured to your organizational requirements.

Key features

- Control Center, a leading PSIM platform, integrates your physical security assets to protect your people and maintain operations within your campus and buildings
- Collect, analyse, and verify information and data efficiently
- Validate identities faster and more accurately, plus view and managed event alarms being pushed from Wavestore to Everbridge Control Center, enabling operators to take appropriate and time-sensitive action
- Customise actions from triggered events, such as when a person of interest presents a token to a specific door reader, which enables any number of actions such as operating third-party components like lights, emailing video clips and alerting security personnel
- Easily search for access control events from any keyword, such as person's first name, surname, or any other database credentials, which will instantly bring up video and backup using Wavestore's 3-click evidential export function from associated cameras
- Ability to connect to multiple servers in case of large systems
- Pull recorded video from different sources / tracks
- Use 2-way audio from any supported device connected to the Wavestore server
- Export video recorded in the Wavestore server
- Create, record and query annotations for a specific camera
- Using Wavestore's EcoStore™, hard drives can be arranged into individual groups, which means that when one group is in use, for example camera data is being written to it, then the other disks can be spun down, saving costs and energy consumption

WAVESTORE INTEGRATES

Everbridge Control Center

What to order

To enable Everbridge Control Center Integration with Wavestore's VMS, please order the following for each Wavestore NVR/HVR:

INT-WS-EVERBRIDGE-01 - Integration module for full two-way communication between Wavestore and Everbridge. Order one per Wavestore Video Server/NVR/HVR.

The Everbridge Control Center integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.

About Everbridge

Everbridge, Inc. (NASDAQ: EVBG) is a global software company that provides enterprise software applications that automate and accelerate organizations' operational response to critical events in order to keep people safe and businesses running.

The Everbridge Critical Event Management (CEM) Platform delivers organizational resilience on an unprecedented scale - combining real-time monitoring, risk intelligence and integrated response and collaboration solutions from a single enterprise-wide view. Additionally, with Everbridge's focus on physical security, organizations will be able to gather a broader range of situational intelligence and automate targeted responses throughout their entire safety, security, and operational continuum - from across a global footprint to within campuses and facilities.

Everbridge enables business, government and healthcare organizations to improve how they identify, manage and respond to the many critical events which disrupt daily operations and put the safety of their people, as well as their business assets, supply chain and brand reputations, at risk.
