

# Feenics

Wavestore's integration with Feenics provides an intuitive and scalable total security solution, combining high resolution video, clear audio and powerful data with intelligent access control. Set up automatic events, alarms or triggers for time and cost efficiencies, and secure any premises whilst making access easy for authorised personnel.

## Server side

When an event occurs, for example when a token is presented to an access reader, the Feenics access control servers will push data to the Wavestore VMS servers via the connected network. After being sent, the data is then stored and accessed from the Wavestore metadata database, which is an option you must include when specifying your Wavestore VMS edition. The information from the Feenics Keep server can be associated with any number of cameras, which adds powerful visual verification and brings enhanced operator decision-making.

The system can be programmed to react to different events and trigger actions based on these. This includes utilising third-party devices, such as switching on a light, opening a layout on a video wall, or sending an alert and attached video clip to a specified person, for example during an unauthorised access attempt. Event rules can be configured to combine triggers from multiple different sources, enabling users to build complex causes with multiple logic operators and timers, all in an intuitive Event Rules setup. Event triggers can be scheduled or activated by a particular action, and rules can be configured using Boolean operators.

Installation is determined by the end users' requirements. The VMS can be installed on Wavestore's own range of servers, or on a host of compatible third-party brands, accommodating video, data and recording management.

The Feenics Keep server provides full access control enrolment, administration, control, and management across the end-customer site, all whilst being hosted in the cloud. This means that it can be managed from anywhere with an internet connection and is essentially limitless in its capabilities to exchange data between systems.

## Client side

The WaveView client software application can be installed on multiple machines to access the Wavestore server(s). WaveView provides complete live monitoring and playback control of cameras and other devices, as well as enabling data from the Feenics system to be monitored and controlled from the same screen. This allows an operator to view live video from multiple cameras, playback easily from minutes, hours or weeks, and search for events. Triggers can also be managed from this platform, which are linked to access control events either in real time as they happen, or via post-event interrogation. Operators are then able to easily stitch together video from time-synchronised events using Wavestore's 3-click evidential export function.

Typically, to prevent the use of stolen or borrowed access badges, a second factor of authentication is introduced. This could be in the form of a biometric reader or PINs; both approaches can have a dramatic impact on the time taken to pass through a door or turnstile and can therefore be unsuitable for high traffic entrances. Linking video with event alerts can remove the need for two-step authentication and make controlling who has access more efficient.

## Key features

- Combining Wavestore's intuitive VMS and Feenics' intelligent access control provides an exceptional solution for video, data and access control management
- Make use of the only ACaaS that was built specifically for the cloud, combined with a scalable and future-proof VMS for highly customisable solutions
- Give real-time context to access control events with video which can be expanded on alarm, easily searched, and viewed post-event
- One screen, total control – just one operator screen to seamlessly manage events from CCTV, access control and other integrated technology
- Customizable event colours and sound for any event on the Live event stream
- Customise actions from triggered events, such as when a person of interest presents a token to a specific door reader, which enables any number of actions such as operating third-party components like lights, emailing video clips and alerting security personnel.
- Pop up camera on alarm on a predefined Video Display Area
- Switch layout on the client workstation to provide an overview on the area of interest where the alarms has just occurred
- View video of events in real time, such as access denied with the option to automatically and instantly transmit associated video clips
- Easily search for access control events from any keyword, such as person's first name, surname, or any other database credentials, which will instantly bring up video and backup using Wavestore's 3-click evidential export function from associated cameras

## WAVESTORE INTEGRATES

# Feenics

### What to order

To order Feenics Integration with Wavestore's VMS, please request the integration module upon placing any license orders:

INT-WS-FEENICS-01 - Integration module for full one-way communication between Wavestore and Feenics. Order one per Wavestore NVR/HVR.

The Feenics integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: [info@wavestore.com](mailto:info@wavestore.com)

### About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.

### About Feenics

Feenics is paving the way for the future of physical security with innovative cloud-based access control solutions developed by security industry veterans. We make it possible for organizations to systemically secure buildings, doors and assets with the only true access control as a service solution (ACaaS) built specifically for and hosted in the public cloud.
