

# Fortecho Aspects ARTS

Wavestore's VMS perfectly complements Fortecho Aspects™ ARTS. The integration allows cameras to automatically move, zoom in and focus on the location the moment an asset is touched with pre-event footage automatically displayed to give a complete picture of how the event unfolded.

## Server side

The Wavestore VMS can be installed on Wavestore's own range of servers, or on a host of compatible third-party brands, providing video, data and recording management across the endcustomer site. The Fortecho Aspects ARTS server provides full RFID enrolment, administration, control and management across the end-customer site. On event, data from the Fortecho server is sent to, stored in, and accessed from the Wavestore metadata database, which is an option you must include when specifying your Wavestore VMS edition.

Wavestore's VMS allows other technologies to be integrated into the system, such as Access Control around the site for staff or facial recognition systems for identifying persons of interest, such as pickpockets in a building that is open to the public – this information can even be shared across numerous sites if authorised. These additional integration possibilities are completely scalable and future proof meaning that the system can grow into the future to protect initial investment.

## Client side

Wavestore's WaveView client software application can be installed on multiple client machines to access the Wavestore server(s). WaveView provides complete live monitoring and playback control of cameras and other devices as well as enabling data from the Fortecho system to be monitored and controlled from the same screen.

The integration between Wavestore and Fortecho Asset Management allows the operator to view live video, search for events – such as tampering or movement of assets - or manage triggers linked from events either in real time as they happen or via post-event interrogation. Operators are then able to easily stitch together video from time-synchronised events using Wavestore's 3-click evidential export function.

## Key features

- Simultaneously, footage of the event can be sent to key personnel while details of the alarm and asset in question is overlaid onto the CCTV footage in the control room in real time. Importantly, the entire process is controlled by the Wavestore and Fortecho software providing an extremely robust and reliable solution that does not require any additional hardware
- Wavestore and Fortecho together provide a best-in-breed solution for video, data and asset management
- Add video to RFID events and benefit from real-time, on alarm and easily searchable post-event viewing
- Easily search for events from any keyword, such as asset name or any other database credentials, and instantly bring up video and backup using Wavestore's 3-click evidential export function from associated cameras
- View video of events in real time, such as asset touched or asset moved
- One screen, total control – just one operator screen to seamlessly manage events from CCTV, asset management and other integrated technology
- Wavestore is compatible with a host of other best-in-breed third-party equipment allowing flexible camera choice in a range of technology (HD, 360°, thermal), for example, as well as other technology such as Access Control and video analytics

## WAVESTORE INTEGRATES

# Fortecho Aspects ARTS

### What to order

To enable Fortecho Asset Management integration with Wavestore's VMS, please order the following for each Wavestore NVR/HVR:

INT-WS-FORTECHO-01 - Integration module for full one-way communication between Wavestore and Fortecho. Order one per Wavestore NVR/HVR.

The Fortecho integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: [info@wavestore.com](mailto:info@wavestore.com)

### About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.
