

# ISM

Wavestore's integration with ISM Genesys platform gives users a seamless and scalable security solution to effectively monitor and control security systems.

Alerts and events can be managed from one screen, allowing for multiple triggers to be specified and enabling a scalable integrated security solution.

## Server side

Integrated using Wavestore SDK, ISM Genesys platform connects to either singular or multiple servers, enabling both large and small solutions to benefit from the intuitive features. Data can then be received from a variety of inputs, which are then processed and stored within the Wavestore server. Alarms from any Sever errors are displayed along with communication failures. Live and recorded video data can be pulled directly from the server, to give the same user experience as the native WaveView client application.

All events and alarms are handled by the Wavestore server, which can be responded to in real-time utilising any 2-way audio supported devices that are connected.

Wavestore's VMS can be installed on Wavestore's own range of servers and appliances, or on a host of compatible third-party servers to provide video, data and recording management across the end-customer site. It enables a completely scalable, future-proof platform to integrate a host of third-party technologies, such as Access Control and Intelligent Video Analytics, onto a single screen.

## Client side

Wavestore's WaveView client software can be installed on multiple client machines to access multiple Wavestore servers and appliances. Server Groups, a feature of Wavestore Premium and Enterprise licence levels, allow multiple Wavestore servers and appliances to be viewed on the same WaveView client.

WaveView provides complete live monitoring and playback control of cameras and other devices and allows an operator to view live video, search for events or manage triggers linked from events either in real time as they happen, or via post-event interrogation. This allows an operator to view live video from multiple cameras, playback easily from minutes, hours or weeks, and search for events. Operators are then able to easily stitch together video from time-synchronised events using Wavestore's 3-click evidential export function. Data from the ISM system is monitored and managed from one screen, giving users total control.

## Key features

- Seamless control room environment for large and small security solutions
- Provide effective responses to incidents through events and alarms
- Control and monitor all security systems within an infrastructure
- One screen, total control – just one operator screen to seamlessly manage events from CCTV, access control and other integrated technology
- Customise actions from triggered events, such as when a person of interest presents a token to a specific door reader, which enables any number of actions such as operating third-party components like lights, emailing video clips and alerting security personnel
- Popup camera on alarm on a predefined Video Display Area
- Switch layout on the client workstation to provide an overview on the area of interest where the alarms has just occurred
- Easily search for access control events from any keyword, such as person's first name, surname, or any other database credentials, which will instantly bring up video and backup using Wavestore's 3-click evidential export function from associated cameras
- Using Wavestore's EcoStore™, hard drives can be arranged into individual groups, which means that when one group is in use, for example camera data is being written to it, then the other disks can be spun down, saving costs and energy consumption
- EcoStore™ can be used in conjunction with Hyper-RAID™, meaning that if one or more of the drives fail, data can continue to be recorded and safely stored with no loss

## WAVESTORE INTEGRATES

# ISM

### What to order

To order ISM Integration with Wavestore's VMS, please request the integration module upon placing any license orders:

INT-WS-ISM-01 - Integration module for full one-way communication between Wavestore and ISM. Order one per Wavestore Video Server/NVR.

The ISM integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: [info@wavestore.com](mailto:info@wavestore.com)

### About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.
