

MAXXESS Access Control

Fully customised solutions enable you to maximise protection from new and emerging threats, reduce the risk of business disruption, optimise process efficiency, improve return on investment and build competitive advantage from your real-time information.

Key features

- Wavestore and Maxxess together provide a best-in-breed solution for video, data and access control management
- Add video to access control events and benefit from real-time, on alarm and easily searchable post-event viewing on both Wavestore's WaveView client and Maxxess' eFusion client
- Easily search for access control events from any keyword, such as person's first name, surname or any other database credentials and instantly bring up video and backup using Wavestore's 3-click evidential export function from associated cameras
- Benefit from Maxxess' integration with other leading Access Control technology such as SALTO door locks
- One screen, total control – just one operator screen to seamlessly manage events from CCTV, access control and other integrated technology
- Ability to customise actions to trigger events, such as when a person of interest presents a token to a specific door reader, any number of actions can be performed thanks to the Wavestore rules engine

Server side

The Wavestore VMS can be installed on Wavestore's own range of servers, or on a host of compatible third-party brands, providing video, data and recording management across the end-customer's site. The Maxxess server provides full access control enrolment, administration, control and management across the end-customer site. Wavestore VMS servers and Maxxess eFusion Access Control servers are connected to each other via TCP/IP and data is pushed from the Maxxess server into the Wavestore server when an event occurs – such as when a token is presented to an access control reader.

To facilitate transmission of data an application called Maxxess bridge, available from Wavestore, is required to be installed on the Maxxess server which converts data from the serial connection to TCP/IP which is transmitted back over the network. This data is then sent to, stored in, and accessed from the Wavestore metadata database, which is an option you must include when specifying your Wavestore VMS edition. The data pushed to the Wavestore metadata database by the Maxxess server can be associated with any number of cameras, adding powerful visual

verification and bringing enhanced operator decision-making to an integrated security solution. Maxxess eFusion has also integrated the Wavestore SDK, enabling video from events to be pulled the other way from the Wavestore server into the eFusion server. This allows the two different systems to be used independently but share the same event information with associated video.

Client side

Wavestore's WaveView client software application can be installed on multiple client machines to access the Wavestore server(s). WaveView provides complete live monitoring and playback control of cameras and other devices as well as enabling data from the Maxxess system to be monitored and controlled from the same screen.

This allows an operator to view live video, search for events, including text search of names, type of event, card or door - or manage triggers linked from access control events either in real time as they happen or via post-event interrogation. Operators are then able to easily stitch together video from time-synchronised events using Wavestore's 3-click evidential export function.

WAVESTORE INTEGRATES

MAXXESS Access Control

What to order

To enable Maxxess Access Control integration with Wavestore's VMS, please order the following for each Wavestore NVR/HVR:

INT-WS-MAXXESS-01 - Integration module for full two-way communication between Wavestore and Maxxess. Order one per Wavestore NVR/HVR.

The Maxxess integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.
