

Netgenium

Wavestore’s integration with Netgenium allows operators to set up pre-recorded automated alerts which are triggered manually or by specific events. A one-way audio solution can be delivered using Wavestore’s event engine, which will allow the users to setup rules to trigger pre-recorded audio clips.

Key features

- Set Wavestore to play specific audio files on any event, such as a siren when a ‘door held open’ event is received from the Access Control system
- Easily search for events from any keyword and instantly bring up video and backup using Wavestore’s 3-click evidential export function from associated cameras
- Ability to customise actions to trigger events with any number of actions performed thanks to the Wavestore events engine
- One screen, total control – just one operator screen to seamlessly manage events from all integrated technology, such as Access Control and Intelligent Video Analytics

Server side

The Netgenium server is connected over the network to Wavestore’s Event Engine, which is an option you must include when specifying your Wavestore VMS edition. Wavestore’s Events Engine can be utilised to provide enhanced monitoring and security systems through the inclusion of event rules which, when triggered, allow the system to employ a number of actions such as switching on a siren sound or connecting to a third-party device, such as lighting or access control. Furthermore, the data collected is fully searchable for post-event interrogation, making it possible to retrospectively recall video with associated audio relating to a specific scenario, for interrogation or evidence.

Two-way audio is made possible when connected to compatible audio devices, including cameras with built-in speakers, to allow operators to communicate either when alerted by the system to an incident, or when visually assessing a situation in real-time. Wavestore’s VMS can be installed on Wavestore’s own range of servers/ appliances, or on a host of compatible third-party brands, providing video, data and recording management across the end customer’s site.

Client side

Wavestore’s WaveView client software application can be installed on multiple client machines to access the Wavestore server(s). WaveView provides complete live monitoring and playback control of cameras and other devices with any event information displayed as an overlay on the video from associated cameras, affording the operator quick situational awareness.

WaveView enables the operator to view live video, search for events or manage triggers linked from events either in real time as they happen, or via post-event interrogation. Operators are then able to easily stitch together video from time- and lip-synchronised events using Wavestore’s 3-click evidential export function.

WAVESTORE INTEGRATES

Netgenium

What to order

To enable Netgenium integration with Wavestore's VMS, please order the following for each Wavestore Video Server/NVR:

INT-WS-NETGENIUM-01 - Integration module for full two-way communication between Wavestore and Netgenium. Order one per Wavestore Video Server/NVR.

The Netgenium integration module is compatible with Premium, and free of charge with all Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.

About Netgenium

Formed in 2000 by network engineers who realised that IP Convergence was about more than just voice and video, they are a manufacturer of IP Power over Ethernet (PoE) products and solutions, based in the North East of England, specialising in three main industries: audio, lighting and access control. Their portfolio has gradually expanded to include a comprehensive IP Public Address solution, with devices and software found in both public and private sector environments.
