

# Veracity Viewscope

Wavestore's integration with Viewscope from Veracity Systems Ltd gives users a seamless control room to effectively monitor and control security systems. Operating from a single screen, alerts and events can be managed, with multiple triggers specified, to enable an intuitive and integrated security solution.

Integrated using Wavestore SDK, Viewscope connects to either singular or multiple servers, enabling large solutions to benefit from its features. Data can then be received from a variety of inputs, which are then processed and stored within the Wavestore server. Information such as the current status of the server(s), a list of available cameras, recorded video and live streams, are pulled through to give full situational awareness to the Viewscope operator. Events can be responded to in real-time if configured with the Wavestore server.

Using a common interface, the integration between Wavestore and Viewscope allows users currently on legacy and unsupported video management systems to migrate seamlessly to Wavestore's VMS. This extends the life of existing systems whilst benefitting from the latest camera technologies.

Wavestore's VMS can be installed on Wavestore's own range of servers and appliances, or on a host of compatible third-party servers to provide video, data and recording management across the end-customer site. It enables a completely scalable, future-proof platform to integrate a host of third-party technologies, such as Access Control and Intelligent Video Analytics, onto a single screen.

Wavestore's WaveView client software can be installed on multiple client machines to access multiple Wavestore servers and appliances.

WaveView provides complete live monitoring and playback control of cameras and other devices and allows an operator to view live video, search for events or manage triggers linked from events either in real time as they happen, or via post-event interrogation. This allows an operator to view live video from multiple cameras, playback easily from minutes, hours or weeks, and search for events. Operators are then able to easily stitch together video from time-synchronised events using Wavestore's 3-click evidential export function. Data from the Viewscope system is monitored and managed from one screen, giving users total control.

## Key features

- Seamless control room environment for security and mission-critical applications
- Effective response to and management of events
- Control and monitor all security systems within an infrastructure
- Ability to connect to multiple servers in case of large systems
- Play back video from different sources / tracks
- Use 2-way audio from any supported device connected to the Wavestore server
- Export video recorded in the Wavestore server
- Create, record and query annotations for a specific camera
- Using Wavestore's EcoStore™, hard drives can be arranged into individual groups, which means that when one group is in use, for example camera data is being written to it, then the other disks can be spun down, saving costs and energy consumption
- EcoStore™ can be used in conjunction with Hyper-RAID™, meaning that if one or more of the drives fail, data can continue to be recorded and safely stored with no loss

## WAVESTORE INTEGRATES

# Veracity Viewscope

### What to order

To enable Veracity Viewscope Integration with Wavestore's VMS, please order the following for each Wavestore Video Server/NVR/HVR:

INT-WS-ICOMPLY-01 - Integration module for full two-way communication between Wavestore and Veracity Viewscope. Order one per Wavestore Video Server/NVR/HVR.

The Veracity Viewscope integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: [info@wavestore.com](mailto:info@wavestore.com)

### About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.

### About Veracity Systems Ltd

Veracity Systems Ltd is a leading provider of innovative, intelligent solutions that solve real-world IP video challenges in transmission, storage and display, in 2017. Building on 19 years of software development experience, Veracity has a proven track record in delivering configurable solutions. Incorporating both legacy and new technologies, Veracity can meet today's client requirements whilst the software is agile enough to adapt to emerging trends.
