

Immix Cloud Alarm Management

Wavestore's integration with the Immix CS/ CC Platform enables Wavestore users to benefit from a wide range of services and features enabling operators to take the appropriate course of action whenever events occur.

Server side

Wavestore's VMS can be installed on Wavestore's own range of servers and appliances, or on a host of compatible third-party servers to provide video, data and recording management across the endcustomer site. It enables a completely scalable, future-proof platform to integrate a host of third-party technologies, such as Access Control and Intelligent Video Analytics, onto a single screen.

Either full quality or a bandwidth friendly quality live H.264 video stream* can be transmitted to Immix Cloud over RTSP from Wavestore servers and appliances with triggered events are sent via point-to-point SMTP to Immix Cloud. To facilitate this communication, Wavestore's Metadata Engine must be specified at the time of order. Events received by Immix Cloud can be associated with specific actions depending on the type of event, including pop-up alarms, initiating a workflow or notifying security staff via their mobile device.

Client side

Wavestore's WaveView client software can be installed on multiple client machines to access multiple Wavestore servers and appliances. Server Groups, a feature of Wavestore Premium and Enterprise licence levels, allow multiple Wavestore servers and appliances to be viewed on the same WaveView client.

WaveView provides complete live monitoring and playback control of cameras and other devices and allows an operator to view live video, search for events or manage triggers linked from events either in real time as they happen, or via post-event interrogation. Operators are then able to easily stitch together video from time-synchronised events using Wavestore's 3-click evidential export function. Operators of Immix Cloud are able to view video from any authorised camera connected to the user's Wavestore system.

Key features

- Live video managed by Wavestore's VMS can be viewed via Immix Cloud, while alarm events can be pushed from Wavestore to Immix Cloud, enabling operators to take the appropriate course of action
- Combines leading VMS functionality with leading alarm verification services
- Stream live H.264 video to Immix Cloud from Wavestore servers and appliances over RTSP
- A host of specific events such as triggered alarm, camera fault, motion detected, ANPR match, object abandoned, loitering and door forced etc. can be sent to Immix Cloud for specific and unique action
- Very easy to set up with full documentation provided
- One screen, total control – just one operator screen to seamlessly manage events from CCTV, asset management and other integrated technology
- Easily search for events from any keyword, such as asset name or any other database credentials, and instantly bring up video and backup using Wavestore's 3-click evidential export function from associated cameras.

WAVESTORE INTEGRATES

Immix Cloud Alarm Management

What to order

To enable Immix Integration with Wavestore's VMS, please order the following for each Wavestore NVR/HVR:

INT-WS-IMMIX-01 - Integration module for full two-way communication between Wavestore and Immix. Order one per Wavestore NVR/HVR.

The Immix integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.

About Immix

Immix is a software company that does one thing. We develop software to improve your ability to manage and respond to security events by creating an intuitive, easy to use software integration platform. Whether it's to protect your customer's facilities, assets and people or your own, our mission has always been the same: to provide a common platform connecting different systems. We call this software Immix, which means to mix, and we now integrate with over 500 of the top security products and systems in the market.
