

Ksenia Intrusion Detection

The integration between Wavestore VMS and the Ksenia intrusion detection system is designed to provide users with a seamless and effective security solution that brings together video surveillance and intrusion detection systems.

Server side

The integration between Wavestore VMS and Ksenia Intrusion Detection involves connecting the Ksenia panel to the Wavestore server via the network. To enable the integration, the Ksenia Module needs to be specified at the time of order and enabled on each Wavestore server within the solution.

Once the integration is set up, data is pushed from the Ksenia intrusion detection system into the Wavestore server, via SIA IP protocol, when any intrusion event is triggered. This data is sent to, stored in, and accessed from the Wavestore Metadata Engine, which needs to be specified at the time of order as well. The data pushed to the Wavestore Metadata Engine by the Ksenia intrusion detection system can be associated with any number of cameras, adding powerful visual verification and bringing enhanced operator decision-making to an integrated security solution. Data can be also pushed from the Wavestore server in case any of the associated device, i.e. cameras with video analytics, detects an intrusion events to the Ksenia intruder panel.

Wavestore's integration with Ksenia allows intrusion detection events to be received by Wavestore's VMS to deliver a truly unified security solution that combines powerful video, data, and audio management with leading intrusion detection capability. The integration enables operators to view and manage intrusion events in real-time alongside video footage and other system events, providing complete situational awareness and efficient incident response.

Client side

The integration between Wavestore VMS and the Ksenia intrusion detection system provides a seamless and comprehensive security solution for end-users. On the client side, Wavestore's WaveView client software can be installed on multiple client machines to access the Wavestore server(s). The WaveView software provides complete live monitoring and playback control of cameras and other devices, allowing the operator to view live video, search for events, or manage triggers linked to intrusion events either in real-time or via post-event interrogation.

With the Ksenia intrusion detection integration, operators can also monitor and control the intrusion detection events from the same screen, enabling them to view and manage the events in real-time. This integration allows for a truly unified security solution, where video and intrusion detection events are managed together for a more effective security system.

The Wavestore's 3-click evidential export function also allows operators to easily stitch together video footage from time-synchronized events from one or multiple cameras simultaneously into a variety of file formats, and create a storyboard of events with a sequence of cameras, including virtual PTZ control of 360° fisheye cameras. This feature makes it easy for operators to create reports and share them with other stakeholders.

Key features

- **Real-time notifications:** The integration provides real-time notifications of intrusion detection events. This enables users to respond quickly and effectively to security events.
- **Customizable alerts:** Configure personalized notifications and actions based on event types, ensuring the right response to specific security events.
- **Seamless integration:** The integration between Wavestore VMS and Ksenia intrusion detection is seamless, allowing users to view and manage both systems from a single interface. This simplifies the management of security systems and enhances the overall security of a facility.
- **Video verification:** The integration allows users to easily associate intrusion detection events and alarms with corresponding video footage. This provides video verification of intrusion events, helping to improve the accuracy and effectiveness of security measures.
- **Centralized management:** The integration provides centralized management of both video surveillance and intrusion detection systems. This makes it easier to manage security systems and ensure that they are operating effectively.
- **Wavestore's VMS is compliant with SIA Level 3 event protocol** enabling it to receive and interpret events from a wide range of sources, including access control systems, intrusion detection systems, and fire alarms. This allows Wavestore's VMS to integrate with a wide range of security devices and receive real-time event information from them.

WAVESTORE INTEGRATES

Ksenia Intrusion Detection

What to order

To enable Ksenia Intrusion Detection integration with Wavestore's VMS, please order the following for each Wavestore Video Server/ NVR:

INT-WS-KSENIA-01 - Integration module for full one-way communication between Wavestore and Ksenia. Order one per Wavestore Video Server/ NVR.

The Ksenia integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

As a British developer, Wavestore takes pride in its innovative open-platform Video Management Software (VMS) designed to offer unmatched flexibility and adaptability. Our commitment to innovation with integrity ensures end-users find the platform easy to use, while security consultants appreciate our dedication to being a reliable and supportive partner in their value chain.

Wavestore's open-platform VMS delivers powerful video recording, storage, and event management, seamlessly integrating with leading security solutions like Ksenia Security's advanced intrusion detection systems. This strategic partnership guarantees a comprehensive, scalable, and user-friendly security solution tailored to your specific needs.

To learn more about Wavestore's innovative VMS and how it can elevate your security solution, visit our website at www.wavestore.com or contact us at info@wavestore.com. Our team is eager to assist you in unlocking the full potential of your security system and fostering a lasting partnership that supports your success.

About Ksenia Security

Ksenia Security is a company that specializes in the development and manufacture of security systems for various industries, including residential, commercial, and industrial. They offer a range of products such as intrusion detection systems, access control systems, video surveillance systems, and more.

Ksenia Security is headquartered in Italy and has a global presence with distributors and partners in different countries. The company's goal is to provide high-quality, reliable, and innovative security solutions to their customers.
