

Datalogic

Integrate Datalogic's pioneering scanning technology with Wavestore's video management software to equip organisations with complete traceability and visual verification of virtually any manufacturing or logistics operation.

Key features

- Enable authorised users to play back video footage of scanned barcodes quickly and easily.
- Provide a timely response to every customer requirement and eliminate unnecessary costs across different sites by having the visual evidence to verify or falsify any claims.
- Video footage can be readily exported and snapshots taken in one of many formats for use by operations teams or users investigating anomalies and queries.
- Correlate triggered events with video to visually verify or deny a customer claim, missed product, lost package or any other cause for concern.
- Streamline processes and rest assured that your organisation is covered from complaints and customer requests due to ability to visually verify the situation.
- Track barcodes from individual products or large boxes that can contain multiple products.
- A reliable loss prevention system that equips operators with the relevant information as and when it's needed with the ability to keep track of a specific product or package.

Datalogic's innovative technology can be combined with Wavestore's near-instantaneous video retrieval capability - irrespective of numbers of cameras their resolutions or retention times - to provide a powerful business optimisation tool.

It also allows organisations of any size to manage their valuable inventory more effectively and it can provide major cost-savings and protect reputation and goodwill by providing the information necessary to resolve customer disputes quickly and accurately.

Server side

Seamless integration with data generated by the Datalogic platform such as a barcode from a single product or of a package that includes multiple products. This information is generated and scanned from any packing station and sent to Wavestore's video server, NVR or HVR. This can then be displayed via WaveView, on an operator's command.

Add video to Datalogic's data and benefit from real-time, on alarm and easily searchable post-event viewing on Wavestore's WaveView client, enhancing the security of your entire retail operations.

Security officers can also benefit from the data provided by the Datalogic integration by complementing it with data provided by other integrations, such as access control and facial recognition to further enhance the overall performance/vision of the entire security system.

Client side

Operators can easily search through Datalogic data from any keyword, such as a barcode number and instantly bring up video related to that product or package, and backup using Wavestore's 3-click evidential export function from associated cameras.

Furthermore, with Wavestore's unique events & metadata engine capabilities, it's now possible for operators to search through thousands of barcodes and retrieve data collected from as far back as days, months or even years (depending on the customer's requirements). These results are displayed within seconds.

Click on the first video-results that are displayed on the screen almost-simultaneously.

Depending on other integrations with Wavestore and a product database, operators can be equipped with the capability to search not for only the product, but also by product name, brand and other identifiable attributes.

Improve and maintain accurate inventory information while providing useful business intelligence data for future planning and operations.

Operators have complete control via one screen to seamlessly manage events from CCTV, access control and other integrated technology.

WAVESTORE INTEGRATES

Datalogic

What to order

To order Datalogic Integration with Wavestore's VMS, please request the integration module upon placing any license orders:

INT-WS-DATALOGIC-01 - Integration module for full one-way communication between Wavestore and Datalogic. Order one per Wavestore Video Server/NVR.

The Datalogic integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.
