

Gallagher Access Control

Wavestore's seamless integration with Gallagher Security offers a powerful access control solution designed to meet the unique needs of sites, ranging from small businesses to large enterprises.

Server side

The Wavestore VMS servers and Gallagher Access Control servers are network-connected. Data is sent from the Gallagher Command Centre server to the Wavestore VMS server through the Gallagher REST API whenever an event occurs, such as token presentation to an access control reader. This data is stored in the Wavestore metadata database, providing powerful visual verification and enhancing operator decision-making. Various events can trigger different actions, including controlling third-party devices (e.g., lighting, video wall layout), or sending video clip attachments via email (e.g., unauthorized access attempts). Wavestore's VMS can be installed on Wavestore servers or compatible third-party brands, providing comprehensive video, data, and recording management across the customer's site.

Key Features

- Monitor access points in real-time, allowing you to track who is on your site at all times.
- Assign users or user groups specific access permissions within your site, enhancing security.
- Generate detailed reports on access activity for auditing and time-keeping purposes.
- Trigger emergency action plans such as lockdowns and instant alerts for enhanced site safety.

Gallagher Command Centre handles full access control enrolment, administration, and management across the customer's premises.

Client side

Wavestore's WaveView client software application can be installed on multiple client machines to access the Wavestore server(s). WaveView provides complete live monitoring and playback control of cameras and other devices as well as enabling data from the Gallagher platform to be monitored and controlled from the same screen. This allows an operator to view live video, search for events or manage triggers linked from access control events either in real time as they happen or via post-event interrogation. Operators are then able to easily stitch together video from time-synchronized events using Wavestore's 3-click evidential export function. Preventing the use of stolen or borrowed access badges has typically required the introduction of a second factor of authentication – often either a biometric reader or PINs; both of these approaches can have a dramatic impact on the time taken to pass through a door or turnstile and can therefore be unsuitable for high-traffic entrances.

What to order

To enable Gallagher Access Control integration with Wavestore's VMS, please order the following for each Wavestore NVR/HVR:

INT-WS-GALLAGHER-01 - Integration module for full one-way communication between Wavestore and Gallagher. Order one per Wavestore NVR/HVR.

The Gallagher integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

The British innovator in open platform Video Management Software, guides you in maximizing security solutions and ROI. As an independent VMS partner, Wavestore simplifies even the most complex integrations.

About Gallagher

Gallagher Security is a global leader in integrated technology solutions that help organizations around the world protect, secure, and manage people and assets. Their award-winning solutions are trusted by government, defense, commercial, industrial, healthcare, transportation, mining, and educational organizations in 140 countries.

Solutions for a world we can't yet see
