Wavestore VMS System

Solutions for a world
we can't yet see

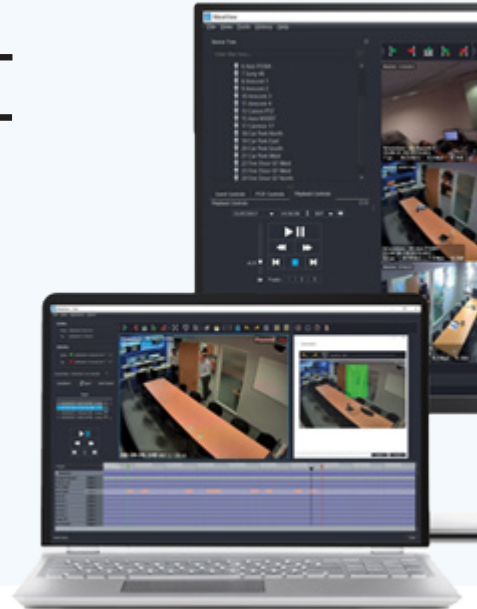

Wavestore has been entrusted to be at the very heart of electronic security solutions all around the world, protecting people, properties and assets across multiple industries.

WaveView Client

One screen, total control

Innovation is at the core of what we do. Our VMS is equipped with a vast number of innovative capabilities, many of which are unique to Wavestore, and which deliver real-world benefits to our customers.

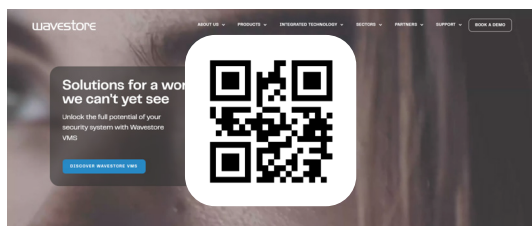

Video Servers & NVRs

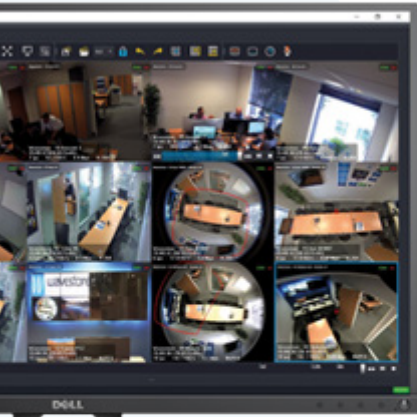

Our range of Video Servers and NVRs come pre-installed with Wavestore's Video Management Software and deliver a robust and reliable recording solution for a wide range of applications, from general purpose surveillance to fully integrated enterprise solutions.

Integrate with ease, innovate with freedom

Embrace the freedom to design a security system that resonates with your unique needs. Our VMS software allows you to seamlessly integrate technologies from the world's leading brands. This ability to customise ensures that your security solution is effective and a perfect fit for your specific requirements.

DL Video Analytics

Wavestore's Deep Learning Video Analytics adds the ability to detect and search for a wide range of behaviours and events, system-wide, to provide a truly intelligent Video Management System.

This powerful extension to our core VMS software utilises virtually any IP camera and can easily be deployed as part of a new project, or retro-fitted to existing systems.

Wavestore Vision IP Camera Range

They meet almost any application requirements, 2MP, 5MP, 4K, 360°, Multi-Sensor and even Thermal. The AI models run our Wavestore Deep-Learning Object and People-Tracking video analytics for exceptional detection and event accuracy.

Best-in-breed Facial Recognition

Automate the recognition of known persons with 24/7 monitoring and a centralized knowledge bank, enabling custom real-time alerts and notifications.

Unlock the full potential of your security solution

Our highly secure open-platform Video Management Software enables you to manage video from any type of camera from any leading brand including the latest 4K, 360° and multi-sensor formats, mixing live and recorded views on the same screen at the same time, to provide enhanced situational awareness.

See first-hand how intuitive our VMS is to use and configure.
