## Introducing Wavestore v6.36

Elevating Operational Flexibility and Enhancing  
Automated Security Management

Harness the full potential of on-screen event triggers and responsive client actions with Wavestore v6.36 – now ready for install on specialized, ruggedized hardware platforms.

# Wavestore v6.36 empowers your people & business:

## Hotspots with on-screen Event Triggers

Prevent the need to toggle between screens and systems, saving time and reducing the risk of mistakes

## Thrive anywhere with Wavestore as an Application

Load onto specialized ruggedized hardware, and you get security that's not compromised, wherever you're monitoring.

## Responsive Client Actions

Boost your situational awareness where it counts, with actions that can be automated or activated from a single click.

## Automated Event Triggers

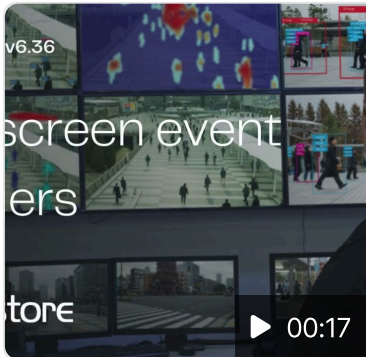

Streamline your tasks - automate the routine, and free your time for what truly matters.

## Colour search and PTZ User Logging enhancements

Restore productivity within your business as we continue to evolve to your challenges from our previous release.
