

Training for Your Team: Mastering Wavestore VMS for Maximum Performance, Efficiency & Control

Wavestore's Video Management Software (VMS) is renowned for its flexibility, openness, and ease of use. However, to truly unlock the full potential of an integrated security solution, specialized knowledge is key.

Whether you are a systems integrator looking to speed up installations, or an end-user operator needing to react instantly to critical events, the Wavestore Training Academy provides the tools you need. We offer a blend of self-paced online modules and expert instructor-led sessions designed to bridge the gap between technology and human capability.

Unlock the Full Potential of Your VMS

By investing in Wavestore training, you ensure that your security infrastructure is not only installed correctly but is utilized to its maximum capacity, ensuring data integrity, rapid incident response, and long-term reliability.

Faster Installations

Equip your engineers with the precise knowledge to configure Wavestore servers, cameras, and recording settings right the first time. Reduce time on-site and eliminate configuration errors that lead to return visits.

Empower Operators

A VMS is only as good as the operator using it. Our training ensures staff can navigate WaveView intuitively, creating instant exports, managing multi-screen displays, and utilizing metadata searches to solve crimes faster.

Master the Event Engine

Move beyond basic recording. Learn how to configure complex cause-and-effect rules, integrating access control, analytics, and audio to create a proactive security ecosystem rather than a reactive recording box.

Build Trust & Credibility

Become a certified Wavestore partner. Our certification paths validate your team's expertise, giving your customers peace of mind that their critical security systems are in the hands of qualified professionals.

A Curriculum Designed for Success: From Installation to Operation

Wavestore Configuration (Online)

The Foundation for Installers

This course is the essential starting point for any technician. It covers the core setup of the Wavestore VMS, including server licensing, adding IP cameras, configuring recording streams, and managing user permissions. It ensures you can take a server from "out of the box" to fully recording in minutes.

Advanced Wavestore Configuration (Online)

Unlocking the Power of Integration

Designed for experienced integrators, this course dives deep into the Wavestore Event Engine. Learn how to script complex rules, manage metadata, and set up advanced actions—such as triggering alarms based on analytics or automating responses to access control events.

WaveView End User Training (Online)

For Daily Operators & Security Staff

Security personnel need to act fast. This course focuses entirely on the WaveView client interface. Operators will learn how to create custom display layouts, scrub through footage efficiently, perform smart searches, and securely export video evidence for law enforcement.

Instructor-Led Technical Training

Hands-On Expert Guidance

For teams that prefer a collaborative learning environment, our Instructor-Led training offers a classroom-based (or virtual classroom) deep dive. Led by Wavestore's own technical experts, these sessions allow for real-time Q&A, scenario-based problem solving, and a hands-on approach to mastering the VMS hardware and software.
